Aegis Latent Core

SEED · OCTOBER 2026

Juan Luna
juan.c.luna04@gmail.com
aegislatent.com

A gateway for AI traffic that writes every request to an append-only ledger, and a pack the buyer can verify without trusting us.

01 · REQUEST

A key names a tenant, a quota and a route. The gateway enforces all three before the upstream call.

02 · LEDGER

The request and the response digest enter an append-only log; each entry carries the previous hash.

03 · PROOF

The customer exports a signed pack and verifies inclusion offline. Our credentials are not part of the proof.

WHY NOW

AI calls move regulated data, but the evidence is still a vendor log line. Buyers who answer to auditors need proofs they can check offline, not a dashboard that asks to be believed.

WHAT EXISTS TODAY

A gateway with keys, quotas and routing; an append-only ledger with Merkle inclusion proofs; a signed export and a verifier that runs on the customer's machine. Self-serve billing, thirteen languages, one API.

MEASURED, NOT ESTIMATED

201 → 200 → 201	Signup, SES delivery and email verification, then the first API key, executed end to end on AWS on 29 October 2026.
19.7 ms p50	50 requests per second through the Function URL: p95 26.5 ms, 1,000 of 1,000 answered. Single-instance database pool.
17 / 17 gates	Full suite on a clean tree, zero cached lanes, 226 s. 121 declared tests across the control plane and both SDKs.
$19.47 / month	Unit cost at one million requests, computed from list prices: Lambda, Postgres, NAT, logs. A model, not an invoice.
24 · 9 · 13	HTTP routes, migrations and shipped locales. The catalogue, the schema and the language set are checked by gates.

BUSINESS, AS A MODEL

$249 · $899 · $3,900	Published list per month: Team, Business, Enterprise floor. Aligned across site, database and documents by a checker that fails on drift.
$50,000 ACV	Mid-market contract value; 3.3-month payback and 9.1 LTV/CAC at a 40-month life. Model, tagged as such in the pack.

MARGIN AT LIST

Team lists 500,000 requests for $249. Two blocks minus the $19.47 unit cost is a 96.1% gross margin. A model built from published prices, not a booking.

THE RAISE

$750,000

$750,000 in three tranches tied to milestones — $300k, $250k, $200k — against an 18-month plan, $33.9k monthly operating cost and a 22–28-month runway after closing.

USE OF FUNDS

Engineering continuity 146.7k · go-to-market 130.0k · assurance 76.5k · legal 39.5k · founder 66.0k · infrastructure 35.0k · recruiting 16.0k · contingency 51.0k.

WHAT WE DO NOT CLAIM

No certifications, no paying customers, no SLA, a single-AZ database and no restore drill executed. Each is a milestone with an owner, not a footnote.

NEXT FOUR MILESTONES

- ☐ Restore drill, executed and timed
- ☐ Multi-AZ database and a second region
- ☐ Stripe live with a real test-card charge
- ☐ SDKs published to PyPI and npm
